Executive Summary

Q1 FY27 · APRIL TO JUNE 2026

The India GCC Tracker reads the quarter the way the market actually moves — one centre at a time. Where most coverage counts companies, we track centres, geocoded and resolved to the micro-cluster, as they open, expand and hire. Across April to June 2026, **99 accounts** opened or grew **110 centres** in India, of which **84 are already live** and **40% belong to first-time entrants**.

Two forces defined the quarter. The market is concentrating: Bengaluru and Hyderabad alone hold **52% of all activity**, **74% of announced hiring** sits in the twelve largest centres, and demand is senior, with **94% of roles** at mid or senior level. At the same time the build is turning AI-first, with **nearly one in four** new centres opening with AI written into their founding charter — from data-centre infrastructure through to agentic and generative products.

Taken together, the signals point one way. India is no longer where global firms come to save cost; it is where they come to build capability, and increasingly to build with AI. The newcomers arrive capability-first while established players deepen their mandates, the corridors are tightening, and the work is climbing the value chain.

Founder

How to read this report

A short orientation to the seven parts, the data conventions we hold to, and the three reader cuts that run through every section.

THE SEVEN PARTS

01 · The quarter at a glance

The totals, the monthly shape, and the three signals that defined the quarter.

03 · On the ground

The quarter mapped, down to the city and the micro-cluster.

05 · Sector in focus: BFSI

One sector read in depth — this quarter, financial services.

02 · Inside the quarter's mix

Who moved, how big, from where, and the work they came to build.

04 · Demand signals & pipeline

What moved, what is coming, and the talent signal beneath it.

06 · Reading the quarter

Why centre-level tracking sees more, and three lenses on the data.

THE CONVENTIONS WE HOLD TO

- **Centre-level, not account-level.** Every figure resolves to individual centres, not parents rolled up to one line.
- **Announced-role floor.** Hiring figures are a floor from centres that disclosed a number.
- **The full universe.** All companies and centre types are counted, from GCC/GIC to manufacturing.
- **Anonymised signals.** Leadership and demand signals are read by sector and geography, not by name.

THREE READER CUTS RUN THROUGH EVERY SECTION

GCC leaders

deciding where to invest

Vendors

deciding where to sell

Ecosystem builders

deciding where to build

The quarter, reduced to its essentials

April to June 2026, read at centre level. These are the totals every later section is measured against — and two splits that set up the quarter: who entered, and how much of the activity is already live.

99 accounts tracked opening or growing a centre	110 centre events — 76% live, 24% announced	40 first-time India entrants — 40% of accounts	27 cities recorded activity this quarter	26 centres announced, not yet live pipeline
---	---	--	--	---

WHO ENTERED

LIVE VERSUS ANNOUNCED

Three in four centres are already live, so most of the quarter's buying is happening now — with a further quarter still to come from the pipeline.

A quarter carried by newcomers, on a narrowing set of locations

Two facts set the scale. 40% of the accounts active this quarter are entering India for the first time — the single largest pool of net-new buying activity in the market. They arrive with no incumbent vendor and a short window in which the first decisions are made. The other 60% are established players, deepening what they already run.

The spread is wider than it looks useful. Activity touched 27 cities, but as the next page shows, most of the weight lands in a handful of them. Read the quarter not as a map filling in, but as a small set of proven locations pulling further ahead — and increasingly building for one thing.

How the quarter built, month by month

The 110 centre events did not land evenly. Activity rose to a clear peak in May, then eased. One city led that peak, and the industry setting the pace shifted underneath it.

CENTRE EVENTS BY MONTH

WHERE AND WHAT LED

MONTH	SHARE	TOP CITY · INDUSTRY
April	25%	Bengaluru · Software & SaaS
May	42%	Hyderabad · Automotive, Software
June	33%	Bengaluru · Software, BFSI

Hyderabad led the quarter's peak month, May. Software and SaaS led overall, with automotive surging in May as several large industrial builds were announced.

A steady build with one clear surge

The trend line rose, then held. April opened with a quarter of the activity, May carried the largest share at 42%, and June settled back to a third. The May peak was not broad-based — it was a Hyderabad event, driven by several of the quarter's largest committed builds, before Bengaluru returned to the front in June.

Underneath the movement, direction held. Software and SaaS led the industry mix across the quarter, with financial services and a strong wave of automotive and industrial activity rotating through the layer beneath. For the pages that follow, the takeaway is continuity: the same lead cities, quarter-deep.

Three signals that shaped the quarter

Beneath the totals, three movements defined the quarter: who came, how they hired, and what they came to build. Each is stated plainly here and carried through the rest of the report.

SIGNAL 01 · THE ENTRANCE

Net-new and deepening at the same time

40% of accounts are first-time India entrants — greenfield demand with no incumbent vendor and a short first-decision window. The other 60% are established players, and across their moves this quarter, expansions and fresh hiring ran roughly three to one over contractions. The market is being built and deepened at once — two different buying motions: a land-grab in the new centres, a growing mandate in the old ones.

— 40% of accounts entering India for the first time

SIGNAL 02 · THE HIRING STRUCTURE

Concentrated, senior, and turning to AI

Announced hiring passed 75,000 roles, but the shape is the signal. 54% of it sat in Bengaluru and Hyderabad, and 74% in the twelve largest centres alone. The demand was senior, with 94% of roles at mid or senior level — enterprises buying judgement and ownership rather than volume. By function, software engineering led and AI and machine learning ranked second, ahead of the broader data function.

— 74% of announced roles in the twelve largest centres

SIGNAL 03 · THE AI SHIFT

AI is now in the founding charter

Nearly one in four new centres opened with an explicit AI or machine-learning mandate written into their brief — and almost all of them, 22 of 26, were already operating rather than pipeline. AI has moved from a role you hire into a reason you open a centre. The work is being built close to live production, not parked in separate pilots.

— 23% of new centres opened with AI in the charter

THE QUARTER
IN ONE LINE

The India GCC build is going AI-first, and it is concentrating.

The profile of the movers

Who moved, how big, from where, and in what industry — one integrated read of the 99 accounts active this quarter, before the report turns to the work they came to do.

HOW BIG · REVENUE BAND OF PARENT

Large enterprise leads the entry mix, with 69% of accounts above \$1B in revenue. A steady sub-\$1B tail of 30% keeps the faster software and specialist names in play.

FROM WHERE · HQ ORIGIN

IN WHAT INDUSTRY · TOP TEN OF 99 ACCOUNTS

A broad base, led by software, with industrial weight beneath it

The mix is wider than any single sector. Software and SaaS leads at 17%, but no industry dominates. Retail and consumer goods and financial services follow at 10% each, and a substantial industrial layer of automotive, aerospace, chemicals and utilities sits beneath. The quarter drew in enterprises of every size and sector, not one buyer type.

Origin and scale tell a consistent story. More than two-thirds of movers are billion-dollar enterprises, and half are North American — but the European and APAC share is real, and the sub-\$1B tail keeps the faster software names present. This is a broad-based entry, and the next page shows what unites it: the work.

What they came to build

The mix says who moved. The work says why, from the kind of centre opened to the functions inside it.

KIND OF CENTRE · SHARE OF 110

GCC/GIC leads at 35%; with R&D and centres of excellence, capability centres are over half the mix.

WHAT WORK · FUNCTION PRESENT

IT and engineering run through three in five centres, R&D one in five; back-office functions stay under one in ten.

THE AI LAYER · WHAT THE NEW AI CENTRES CAME TO BUILD

Nearly a quarter of new centres opened with AI in their brief, and the work is not one kind. **Four distinct plays are landing at once.**

01 AI infrastructure

The physical backbone: data centres, GPU capacity and sovereign-AI programmes.

02 Agentic & generative

Frontier product work: generative AI, autonomous systems and AI-driven robotics.

03 AI-native delivery

AI sold outward: AI-first services and delivery for global clients.

04 Applied AI by sector

AI embedded in a vertical: clinical trials, insurance, aviation and streaming.

India is building the AI stack end to end, from the data centre and training data up to agentic products, not just staffing it. **Even the AI supply chain is arriving**, with a new Hyderabad training-data lab this quarter.

Capability-led, and increasingly built around AI

The work is concentrated at the top of the value chain. GCC/GIC and capability centres lead the type mix, and inside them technology and engineering dominate the function mix at three to six times the weight of any back-office function. Only two shared-services set-ups opened all quarter. India entry now begins with capability, not cost.

And the capability is turning to AI. The work runs the full stack, from infrastructure and training data to agentic products, across mobility, pharma, insurance and media. The profile of the movers is broad; what they build is not. It is engineering-led, and organised around AI.

Where every centre opened or expanded

110 centre events across 27 cities — 84 live, 26 in the pipeline. Each dot is a real centre at coordinate level, not an account rolled up to a city.

BENGALURU & HYDERABAD

Two cities hold half the quarter

Together they account for **52% of all centre events** — Bengaluru skews software and R&D, Hyderabad skews BFSI around the Financial District and HITEC City.

PUNE & CHENNAI

The entrenched industrial third

Pune is the clear third at **15 events**, blending software with industrial engineering. Chennai draws manufacturing, consumer goods and chemicals.

THE LONG TAIL

Tier-2 keeps widening

23 events landed outside the **top six**, across 19 tier-2 and tier-3 locations. The map is widening, not just deepening.

Inside Bengaluru: the corridors doing the work

29 centre events this quarter, resolved to the micro-cluster — the corridors that actually shape where procurement decisions land, and how concentrated the city has become.

Bengaluru 29 Q1 centre events · four lead micro-clusters · corridor profiles from full BR coverage

● Outer Ring Road (ORR) 9 in Q1

The gravity centre. GCC/GIC and IT at scale, skewing software and Hi-Tech. Nearly a third of the city's activity sits on this one corridor.

● Manyata 3 in Q1

Established tech-park density. GCC/GIC builds skewing retail, consumer goods and software.

● Electronic City 2 in Q1

IT and light-manufacturing belt. IT services with healthcare and life-sciences work.

● Whitefield 2 in Q1

GCC/GIC and R&D. BFSI and utilities charters, on the eastern engineering corridor.

THE READ FOR ANYONE SELLING INTO BENGALURU

The Outer Ring Road alone holds **9 of the city's 29 new centres — nearly one in three**. It is the single densest GCC corridor in the country this quarter, and where the newest software and engineering decision-makers are concentrated. A Bengaluru go-to-market that starts anywhere else starts in the wrong place.

Concentration inside concentration

Bengaluru is not spreading — it is thickening. Beyond the Outer Ring Road, activity clusters in a small set of proven corridors — Manyata, Electronic City and Whitefield — each with its own character: GCC/GIC scale on the ORR, retail and consumer builds at Manyata, IT and light manufacturing at Electronic City, and R&D on the Whitefield engineering belt. The city rewards local knowledge, because the corridor sets the buyer profile.

Inside Hyderabad: the Financial District pulls ahead

28 centre events this quarter, resolved to the micro-cluster — a BFSI-weighted city where the newest corridor is also the most forward-loaded with pipeline.

Hyderabad

28 Q1 centre events · four lead micro-clusters · corridor profiles from full BR coverage

● Financial District

6 in Q1

Forward-loaded. GCC/GIC builds skewing BFSI and pharma — half of it is pipeline, so the buying windows here are still opening.

● HITEC City

5 in Q1

The established core. GCC/GIC and IT at scale, BFSI-weighted, all of it already live.

● Gachibowli

3 in Q1

IT and GCC/GIC density. Software and IT-services charters on the western tech belt.

● Tellapur

3 in Q1

The emerging belt. R&D, CoE and IT, skewing professional services and automotive — a new corridor forming beyond the core.

THE READ FOR ANYONE SELLING INTO HYDERABAD

The Financial District and HITEC City together hold **11 of the city's 28 new centres, and the weighting is BFSI**. The difference is timing: HITEC City is live and buying now, while the Financial District is half pipeline, so its procurement windows open over the next few quarters. Tellapur is the one to watch — a new R&D and CoE belt forming outside the established core.

One city, two clocks

Hyderabad's map is split by time, not just geography. The established core at HITEC City and Gachibowli is live and hiring now — a here-and-now market. The Financial District, half of it still pipeline, is a forward market where the largest BFSI buying windows are yet to open. And Tellapur signals the next corridor, an R&D and engineering belt beginning to form. Reading Hyderabad well means knowing not only where a centre sits, but whether it is buying now or about to.

Commercial real estate for GCCs in Bengaluru and Hyderabad

FULL-PAGE PARTNER PLACEMENT

The names that moved

Recognisable accounts whose Q1 openings or expansions signal broader sectoral intent — four live moves this quarter: two first-time entries and two expansions, across medtech, aviation, data and life sciences.

NEW

GCC/GIC · Medtech
US · \$5–10B revenue

Zimmer Biomet Holdings

Bengaluru

INDIA HEADCOUNT	IN INDIA SINCE	STRUCTURE	MAJOR HUB
Up to 500	2026	Standalone	Bengaluru

FOCUS FROM INDIA

AI, robotics and surgical planning, alongside product design, R&D, quality and regulatory, supporting worldwide product development.

WHY IT MATTERS

The medtech maker's first India GCC — AI- and robotics-led from day one. A marker for how medical-device firms will build in India.

NEW

GCC/GIC · Aviation
US · \$25–50B revenue

Southwest Airlines Co.

Hyderabad

INDIA HEADCOUNT	IN INDIA SINCE	STRUCTURE	MAJOR HUB
200–1,000	2026	Standalone	Hyderabad

FOCUS FROM INDIA

Software engineering, data science, AI and cybersecurity — the airline's first Global Innovation Centre outside the United States.

WHY IT MATTERS

A US aviation major picking India for its first innovation base beyond home. Signals travel and aviation entering the GCC wave, tech- and AI-led.

EXPANSION

GCC/GIC · BFSI
US · \$10–25B revenue

S&P Global Inc.

Gurugram

INDIA HEADCOUNT	IN INDIA SINCE	STRUCTURE	MAJOR HUB
16,000+	2012	Distributed	Gurugram

FOCUS FROM INDIA

A new 3,500-seat office spanning technology, data, operations and customer success — on one of the largest data and analytics footprints in India.

WHY IT MATTERS

A 3,500-role expansion on a 16,000-strong India base shows how data and analytics leaders keep scaling India capability rather than plateauing.

EXPANSION

GCC/GIC · Healthcare & LS
Germany · \$10–25B revenue

Merck KGaA

Bengaluru

INDIA HEADCOUNT	IN INDIA SINCE	STRUCTURE	MAJOR HUB
3,300+	2011	Hub-dominant	Bengaluru

FOCUS FROM INDIA

Data, digital, process and technology across its Life Science, Healthcare and Electronics businesses — anchoring the group's digital enterprise solutions.

WHY IT MATTERS

A European life-sciences major consolidating scattered India operations into one flagship GCC, among its largest global capability hubs.

106 more notable centre events tracked this quarter across 27 cities — available in the platform with full leadership, function and decision-maker detail.

The pipeline decoder

Four buying windows opening over the next four to six quarters. Announced this quarter, not yet operational — each a 12-to-18-month window for vendors, partners, real estate, talent and advisory. This is where news becomes timing.

26 Announced	4 Net-new entrants	22 Expansions	FY27–28 Expected live	HYD · BLR Lead pipeline (7 · 4)
------------------------	------------------------------	-------------------------	---------------------------------	---

THE WINDOW	Q3 '26	Q4 '26	Q1 '27	Q2 '27	Q3 '27	Q4 '27
● NET-NEW · BFSI Canadian Imperial Bank of Commerce First India GCC · Hyderabad · 2,000+ roles	Live Jul '26 Buyer signal — a net-new entrant with no incumbent vendor slate, live from July 2026 with 2,000+ roles in banking technology and analytics. A clean BFSI window opening now, with first-mover advantage for vendors who reach it early.					
● PIPELINE · PHARMA Regeneron Pharmaceuticals First GCC outside the US · Hyderabad	Live H2 '26 Buyer signal — the company's first GCC outside the US, live in H2 2026, spanning data management, statistical programming, digital, AI and clinical-trial operations. A pharma window across clinical-data platforms, AI and regulatory tooling.					
● PIPELINE · MOBILITY Uber Technologies Twin campuses · Bengaluru & Hyderabad · 9,600 planned	Ramping through 2027 Buyer signal — twin campuses of ~9,600 roles across generative AI, machine learning and autonomous, plus a first India data centre with Adani. A multi-quarter window through 2027 across compute, data tooling and AI platforms.					
● PIPELINE · SOFTWARE Microsoft Corp. Gachibowli campus · Hyderabad · 7,300 planned	Campus + data centre · '27 Buyer signal — a new 1.1M sq ft Gachibowli campus for 2,500, another 4,800 hires planned, and a large Telangana data-centre investment. A combined GCC and infrastructure window across cloud, data-centre and platform procurement.					
● Net-new entrant ● Expansion						

Plus **20 more pipeline centres** — Meta with Reliance, Nestlé, Walt Disney, Dassault Systèmes, BASF, Starbucks, Kraft Heinz.

Where the quarter's hiring concentrated

Announced hiring across the quarter's new and existing centres points past 75,000 roles. The more instructive signal is its shape — growth is uneven, landing in a narrow set of cities and sectors, and carried by a small number of large anchor centres.

75,000+ roles announced this quarter across new and existing centres (approx.)	54% of hiring concentrated in Bengaluru and Hyderabad	74% of announced roles sit in the twelve largest centres alone
--	---	--

HIRING BY CITY

HIRING BY INDUSTRY

Growth is concentrating, not spreading

The distribution matters more than the total. Over half of the quarter's hiring sits in two cities, and the twelve largest centres carry most of the announced headcount. The leading clusters are pulling further ahead as their talent pools, real estate and vendor networks deepen — and the distance to the next tier is widening rather than closing.

The sector mix reads the same way. Software and financial services lead, with automotive, industrial and consumer-goods manufacturing forming a substantial layer beneath. For enterprises weighing their own India footprint, the quarter argues for depth over breadth: the organisations setting the pace commit to fewer, larger, well-understood locations rather than distributing hiring thinly across the map.

The demand is senior, specialised, and turning to AI

This is not volume graduate hiring. Demand is weighted toward experienced roles — and the work itself is shifting, with AI and machine learning now second only to software engineering.

SENIORITY PROFILE

94% of roles are experienced, mid or senior

HIRING BY FUNCTION

AI / ML now ranks second, ahead of the broader data function.

THE AI SIGNAL

10% of all roles are AI roles, on a deliberately strict definition

79% of those AI roles are in centres already operating

22% AI intensity in software centres — over double the wider rate

Capability hiring, now turning to AI

The seniority profile answers a question often put to India's GCCs. Hiring is weighted heavily toward mid and senior roles, which means enterprises are buying judgement and ownership rather than volume — smaller entry cohorts, and more experienced professionals brought in to hold a mandate rather than work a queue.

The sharper shift is functional. AI and machine learning has moved ahead of the broader data function to sit second only to software engineering, and it concentrates in centres already operating rather than in the announced pipeline — enterprises are building these teams close to live production, not in separate pilots. The named skills point the same way, with agentic and generative work now ahead of classical machine learning.

Financial services now, manufacturing next

Two forward-looking signals shape the quarter: the sectors committing the largest announced headcount today, and the make-up of the centres announced but not yet live. The first points to financial services; the second to manufacturing.

ANNOUNCED ROLES BY SECTOR

THE FORWARD PIPELINE — CENTRES ANNOUNCED BUT NOT YET LIVE

Manufacturing & industrial · 50%

50% · Technology & services

Automotive, consumer goods, industrial, utilities and chemicals — increasingly outside the established metros.

Software, digital marketplaces, pharma & life sciences, professional services and media.

26

centres announced but not yet live

16%

BFSI share of announced roles — the leading sector

50%

of the forward pipeline is manufacturing & industrial

Two horizons, read at once

Financial services is the quarter's clearest sector story. It leads announced hiring, and unlike sectors whose totals rest on a single large centre, its lead is built across the widest set of moves — new entrants and expansions alike. For a market long associated with technology, the depth of financial-services commitment is the more current reading.

The forward book points elsewhere. Half of the centres announced but not yet live belong to manufacturing and industrial sectors, several in cities that have not previously featured. The next phase looks less like the classic technology-services centre and more like engineering and operations for industrial enterprises — financial services shaping demand now, manufacturing next.

HR technology, and learning and development platforms

Following the talent signal, where hiring and skills are top of mind. Reserved for HRIS and HR-tech, RPO and staffing, EOR and payroll, and contingent-workforce platforms.

FULL-PAGE PARTNER PLACEMENT

Buying windows: moves as signals

Not every window opens with a new centre. A milestone crossed, a lease signed, a mandate elevated, a centre consolidated — each changes who the buyer is, and where the market is quietly shifting.

3:1

EXPAND VS CONTRACT

Scaling & expanding

Consolidating

Across existing centres, expansions and hiring outran contractions about three to one. **The market is rotating, not slowing.**

01

MILESTONE SCALE-UPS

Centres crossed the marks that signal commitment

A US asset manager toward 2,400 people by 2029, a marketing group toward 8,000, an industrial-automation major at 4,000 — its largest base outside home.

➤ Multi-year capability, talent and tooling demand

02

FOOTPRINT EXPANSIONS

Major new leases point to the next hiring ramp

A US semiconductor major doubled its Bengaluru footprint on a ten-year lease; a US retailer took 800,000+ sq ft in the same city.

➤ Fit-out, infrastructure and a hiring ramp to follow

03

MANDATE ELEVATIONS

Leadership handed India a bigger role

A UK asset manager renamed its India arm a key global hub; a retail group is moving customer care from South America to Bengaluru.

➤ A new charter, a new decision-maker, a fresh vendor review

04

CONSOLIDATIONS

Some centres cut, and the work moved to the big two

One US bank closed a southern-metro centre, moving operations into Bengaluru and Hyderabad — contraction here is concentration there.

➤ Talent freed, demand concentrating in the two lead hubs

WHY THESE SIGNALS MATTER

None of these accounts opened a new centre this quarter — a headline scan would miss them. But each just changed its **budget, leadership or location**, the kind of shift that redirects an account long before it surfaces in the numbers.

In practice: GCCs putting AI to work

Not pilots or press releases — established centres that moved real AI work into production this quarter. The further you look, the deeper it has gone.

1 SPEED · THE FIRST DIVIDEND

Before AI ≈ 24 months

With AI 3–6 mo

5× faster

A bank now ships in months what took years

At a European investment bank's 9,000-strong Bengaluru tech function, leadership said AI has cut delivery from ~2 years to 3–6 months. Not a trial — it is how the centre now builds.

And it is going deeper

THREE MORE WAYS THIS QUARTER

PEOPLE

A new AI job title

A healthcare-focused tech-services firm is hiring 1,000 forward-deployed context engineers by 2027 — a role that did not exist before.

●
RESHAPING TEAMS

PRODUCT

AI built into the car

A European carmaker is moving software, AI and global sourcing into its Bengaluru R&D centre — its second largest worldwide, with 8,000+ engineers.

●
INTO THE BUILD

STRATEGY

AI as the growth plan

A US financial-services group crossed 1,000 hires in year one and named AI, data and digital engineering as its explicit next phase.

●
SETTING DIRECTION

THE READ

Four depths of the same shift. AI is no longer a project inside the GCC — it is becoming **how the GCC works**, changing its speed, roles, product and strategy in a single quarter. India is where global firms are operationalising AI, not experimenting with it.

AI technology, services, and GCCs building in AI

Following the AI case studies. Reserved for cloud and generative-AI platforms, data and MLOps tooling, and applied-AI consultancies.

FULL-PAGE PARTNER PLACEMENT

BFSI led the quarter's hiring, and **insurance** led BFSI

Financial services set the pace on hiring this quarter — but it was not a banking quarter. It was an insurance one, concentrated in a single city and built through full captives.

6 in 10

BFSI ENTRANTS ARE INSURERS

16%

of announced roles — the quarter's leading sector

60%

insurance-led, up from banking-led before

50%

of BFSI centres landed in Hyderabad

10/10

entered via a full GCC/GIC captive

WHAT BFSI WAS MADE OF · 10 ACCOUNTS BY SUB-SEGMENT

Insurance & broking 6 60% Banking 2 20% Markets & advisory 2 20%

WHERE BFSI LANDED

Half of all BFSI centres landed in Hyderabad, the country's financial-services hub.

FROM WHERE

US-led but global. Four of the ten are first-time entrants — and three of those four are insurers.

THE READ ON BFSI

Financial services has rotated from **banking to insurance** — six of ten accounts, three of them first-timers, every one a full captive. The centre of gravity is **Hyderabad**, now half the sector's activity. The signal to watch: an early, concentrated insurance GCC wave, built for capability from day one.

Engineering and consulting partners for BFSI

Facing the BFSI sector-in-focus page. Reserved for core-banking and payments technology, RegTech providers, and BFSI-focused system integrators.

FULL-PAGE PARTNER PLACEMENT

Why centre-level tracking sees more

The difference is not more names — it is more resolution. We let the data show what account-level tracking flattens, and centre-level tracking keeps.

WHAT TOP-LEVEL REPORTS SHOW

One account.
One India footprint.

WHAT CENTRE-LEVEL INTELLIGENCE SHOWS

One account. Six centres. Six buying cycles. Six leadership teams.

This quarter, **8 accounts** ran more than one centre, one ran four, and **59 established players** added activity an account-level view records as no change at all.

A new function inside an existing footprint

A software major years into India opened a fresh AI-charter centre. **At account level, no change** — at centre level, a new mandate and leadership team.

A geographic shift within the same account

An industrial account moved into a new state and corridor — a different charter from its southern centre. Account tracking flattens this into one footprint.

A strategic shift inside a routine expansion

An established centre was handed a larger global mandate. The annual report calls it an expansion; the remit and budget owner changed.

One quarter, three lenses

One dataset, three decisions. The same quarter reads differently depending on the seat you are in — here is what it says from each.

FOR GCC LEADERS

Deciding where to invest

- Is your build **capability-led**, in line with a quarter of GCC/GIC, R&D and CoE centres — not back offices?
- Is your city footprint keeping pace with the **52% Bengaluru–Hyderabad** concentration?
- Is AI in your **founding charter**, as it now is for nearly a quarter of new centres?

FOR VENDORS

Deciding where to sell

- Demand is **concentrated** — 74% of announced roles sit in the twelve largest centres.
- It is **senior and AI-weighted**, with AI/ML now the second function.
- The pipeline points to **FY27–FY28**, and insurance is building fastest.

FOR ECOSYSTEM & ITES

Deciding where to build

- Activity is **concentrating in proven corridors** — the ORR and the Financial District.
- The tier-2 tail **keeps widening**, across 19 locations beyond the top six cities.
- The **insurance GCC wave** and a loaded pipeline mark where demand is heading.

The quarter ahead, on the record

Three specific calls for Q2 FY27, published now and scored openly next quarter — a forward view, stated plainly enough to be proven right or wrong.

WHAT WE EXPECT NEXT · THREE CALLS FOR Q2 FY27

01

HIGH CONVICTION

Hyderabad draws level with, or overtakes, Bengaluru

The two are near-tied at 29 versus 28, Hyderabad led the peak month, and it leads the announced pipeline seven to four. The gap has closed four quarters running.

SCORED ON Hyderabad's new-centre count against Bengaluru's next quarter.

02

SOLID

AI enters the charter of one in four new centres

Already 23% and rising, with agentic and generative work ahead of classical ML. AI has become a reason to open a centre, not just a role to hire into.

SCORED ON Share of new centres with an explicit AI or ML mandate at or above 25%.

03

SOLID

The pipeline starts converting to live centres

Of 26 announced centres, the nearest windows are dated: a net-new bank live from July 2026 and a first-outside-US pharma GCC in the second half of the year.

SCORED ON At least three of this quarter's pipeline centres going operational next quarter.

We publish these now and **score them openly in Q2 FY27**. That is what trackable intelligence looks like.

The intelligence layer behind the numbers

The data architecture, sources and definitions behind every figure in this report — set out plainly enough to trust, and to challenge.

5,900+

GCC centres tracked at coordinate level

2,500+

parent accounts under continuous coverage

59,000+

decision-makers mapped across those centres

THE DATA ARCHITECTURE

Accounts

the global parent

Centres

every site, geocoded

Functions

the work inside

Decision-makers

who leads each

Tech & tools

the stack in use

Six linked tables, every layer queryable. We track from the bottom up — each individual centre, not each account rolled up to one line — which lets this report resolve activity down to the micro-cluster.

HOW WE COUNT, AND WHAT THE WORDS MEAN

Centre event

A centre opened, expanded or formally announced this quarter, tracked at **coordinate level**.

The universe

All companies and centres tracked this quarter — **every centre type**, GCC/GIC through manufacturing.

First-time entrant

An account establishing its **first India presence** this quarter, with no prior centre.

Announced-role floor

Hiring figures are a floor from centres that **disclosed a number**, never a total.

GCC analysis

Manufacturing and distribution sites are counted but **held out of the GCC signals**.

Anonymised signals

Leadership and demand signals are described by **sector and geography**, not by name.

A living dataset, not a point-in-time scrape

Centres are enriched continuously by analyst review, with AI as a force multiplier. Appointments, function additions and service shifts are logged as they happen.

Coverage that compounds each quarter

Accounts move into coverage before they go public, and are tracked across moves. The longer an account is followed, the deeper the record.

From reading the quarter to working with it

This report is the surface view. The routes below open the live data underneath it — for readers who want to move from reading the quarter to working with it.

Query the live platform

Move from the printed cut to the full dataset. Filter accounts, centres, functions and decision-makers, and build the view that fits your own question.

A custom intelligence brief

The quarter's data cut for your specific ICP, sector or account list, prepared as a bespoke brief by the analyst team — typically within 24 to 48 hours.
